Kitchen Design - Distinctive Kitchens & Baths, FL

STYLE & FINISH SELECTION GUIDE

Alder & Rustic Alder

Alder is a soft hardwood with fine, straight grain and even texture. The color is uniform and ranges from light tan to honey colored, with no difference between heartwood and sapwood. Small clusters of minor knots are characteristic. Alder takes stains well and finishes beautifully.

Rustic Alder For those customers looking for a natural, rustic look in their cabinetry, The Bellevue Collection offers a “Rustic Grade” material that may be used in most doors and drawer heads. This “Rustic Grade” material includes knots and other sound defects. The knots are of varying size, both sound and unsound defects, but not see through. The distinct elements of the wood, wormholes, and any other sound characteristics make this material rich in character. The material will not be matched for color and may have both sapwood and heartwood present in varying amounts.

Cherry & Rustic Cherry

Cherry's classic, smooth grain finish, deep rich-red color, and stability make it an elegant choice for fine cabinetry. Strong, stiff and moderately hard, Cherry is exceptionally stable and unsurpassed in its finishing qualities. An occasional bird peck or gum spot will be found in some pieces, which enhances Cherry's distinct character. Unique in its photosensitivity, Cherry's red-dish color deepens with age to warm, dark brown hue.

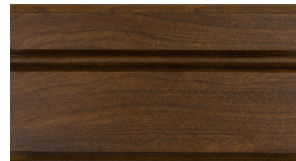

Rustic Cherry For those customers looking for a natural, rustic look in their cabinetry, The Bellevue Collection offers a "Rustic Grade" material that may be used in most doors and drawer heads. This "Rustic Grade" material includes knots and other sound defects. The knots are of varying size, both sound and unsound defects, but not see through. The distinct elements of the wood, wormholes, and any other sound characteristics make this material rich in character. The material will not be matched for color and may have both sapwood and heartwood present in varying amounts.

Hickory

Hickory is a beautiful open grained wood. It is one of the most durable domestic hardwoods available. Hickory can exhibit extreme color variations and particularly appeals to people who love nature and a true wood look. Hickory can include bird pecks, burls, and mineral streaks. These indigenous qualities are not considered defects but actually appeal to the naturalist.

Lyptus

Lyptus is a beautiful hardwood that has received overwhelming praise among professionals for its workability, machining properties, density, finish ability, overall strength, sustainability and exotic appeal. It is an ideal hardwood for cabinetry, millwork, furniture and flooring. The grain is straight, even and coarse-textured, with a slight pinkish hue. Lyptus trees are grown on plantations certified by Cerflor, Brazil's national sustainable forestry certification, making it an excellent option for eco-minded customers. Lyptus wood offers excellent quality, remarkable beauty, and sustainability.

Maple

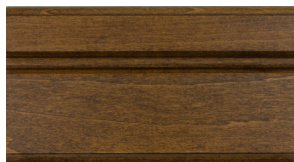

The value of hard **Maple** is its strength, wear resistance, and beauty. Maple is a wood that is evenly textured with a natural luster. While the grain is usually straight, it can also appear wavy or curly. Decorative growth patterns can be found in Maple such as bird's-eye, maple burl, leaf and fiddleback. These characteristics of maple add to its highly prized beauty and luster.

Oak

The value of **Red Oak** lies in its strength, beauty and adaptability, making it ideal for cabinetry. It is hard and highly shock-resistant with excellent matching characteristics and uniform coloration. Red Oak is a dense, open, hard-grained wood with varying vertical and arch patterns. Dark mineral streaks are common and enhance the attractive texture of Red Oak wood.

Pine

Knotty Pine's evenly grained softwood ranges in color from vanilla to brown with a reddish hue. Distinctive knots, ranging in size, shape and color, are a familiar feature of Pine wood. These striking patterns give Knotty Pine a charming appearance. The density of Pine wood varies from hard around the knots to soft in other areas. This variation in density can cause variation in finish absorption. Light distressing is included as standard on all Knotty Pine orders.

Walnut

Our **Walnut** features both lighter sapwood and deeper heartwood. Colors offer a high contrast, ranging from creamy brown to a beautiful dark chocolate brown with rich purplish undertones. Black Walnut is normally straight-grained and is noted for its beautiful grain character, producing more figure variation than any other wood.

At Bellevue Remodel and Design, we believe that you should be able to make your cabinetry an expression of who you are. That is why we will color match a paint swatch or even your favorite shirt, furniture or coffee cup.

Unlimited national branded paint colors are also available. Just provide us the brand and color number and we can match it. Many national branded paint color matches are provided at our standard paint cost.

Custom Ceruse Oak

Ceruse Oak dates back to the 1500s. Ceruse is a white additive that was originally used in cosmetics until artisans discovered that it was beautiful as an accent color on porous woods. When applied to a wood such as Oak, the white pigment fills and highlights grain without changing the overall color of the wood's finish.

Bellevue Cabinetry offers this old-world technique with a custom twist by providing limitless Ceruse options. Add the white Ceruse technique to any stain, paint or paint match color. Bellevue also provides the textured technique in multiple oak species. You can choose between red or white oak and quarter sawn red Oak or white Oak.

Weathered

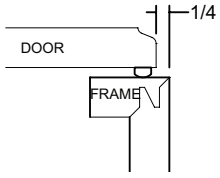

At Bellevue Cabinetry, we focus on every detail. That is why we glaze more than just the doors and drawer fronts. We also make sure face frames, exposed finished ends, moldings, panels and cabinet interiors on open cabinets receive the same finish treatment as the doors and drawers. We provide a consistent appearance. The majority of our competition only glaze doors, drawers and molding.

We offer seven glaze colors, Mocha, Umber, Burnt Umber, Chocolate, Nickel, White and Black, and offer custom distressing, glaze colors and applications to help you achieve your desired look.

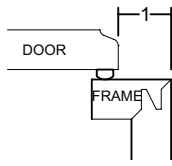

We take it one step further and allow our customers to achieve just the right sheen level. We offer No Sheen, Flat, Matte, Satin and High Gloss.

DOOR OVERLAY OPTIONS

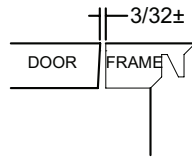

Full Overlay - FO

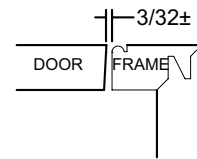

Regular Overlay - RO

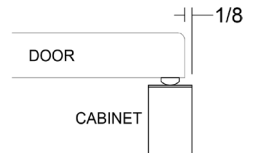

Flush Inset - FI

Beaded Inset - BI

Euro Overlay- EO

At Bellevue, we offer each of our door styles in multiple overlays. This allows you to get the exact look you want at a price you can afford. Most national manufacturers only offer a door style in one or two overlays. When you add in our availability of every door style in every wood specie, we have hundreds more door options than most other cabinet manufacturers. Overlay availability is listed below every door style name.

DOOR STYLE TYPES

Slab

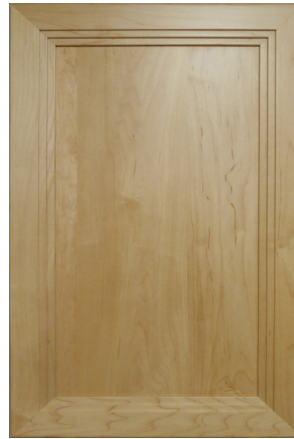

Bellevue Slab doors are made of solid wood or wood ve-neer with varying square or eased edge applications.

Shaker

Bellevue Shaker doors are built with the same "Re-verse Raise" panel as our Recessed Panel doors. The Shaker style provides a clean and simple look and has proven to be one of the most popular and enduring furniture trends in Ameri-ca.

Recessed Panel

Bellevue Recessed Panel doors are always built with a sol-id "Reverse Raise" panel, never with a thin veneer panel. The flat side of this panel faces forward, with the raise rising forward to-ward the back of the door. This maintains girth, reduc-es rattle and provides color consistency by allowing us to always use solid wood with our stained offering

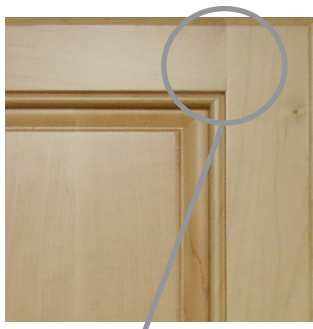

Raised Panel

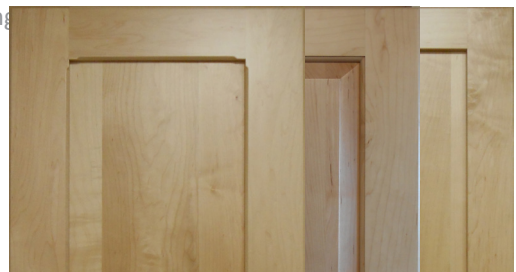

Raised Panel doors have a solid center panel that ris-es from the door frame. These panels are available with several profile options and offer many decorative possibilities.

MITER JOINT

COPE AND STICK JOINT

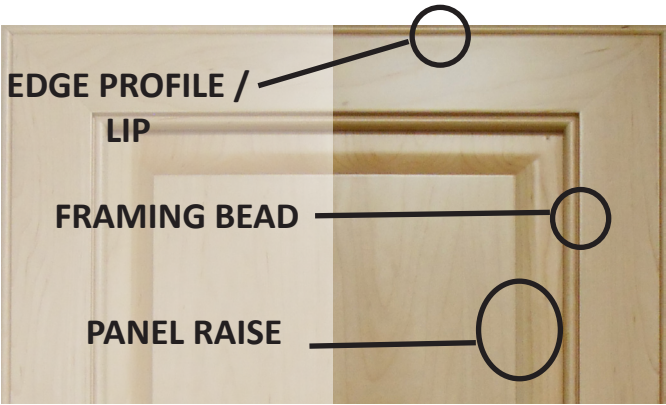

STILES AND RAILS COME IN DIFFERENT SIZES

These size variations allow you to get a look that appeals to you.

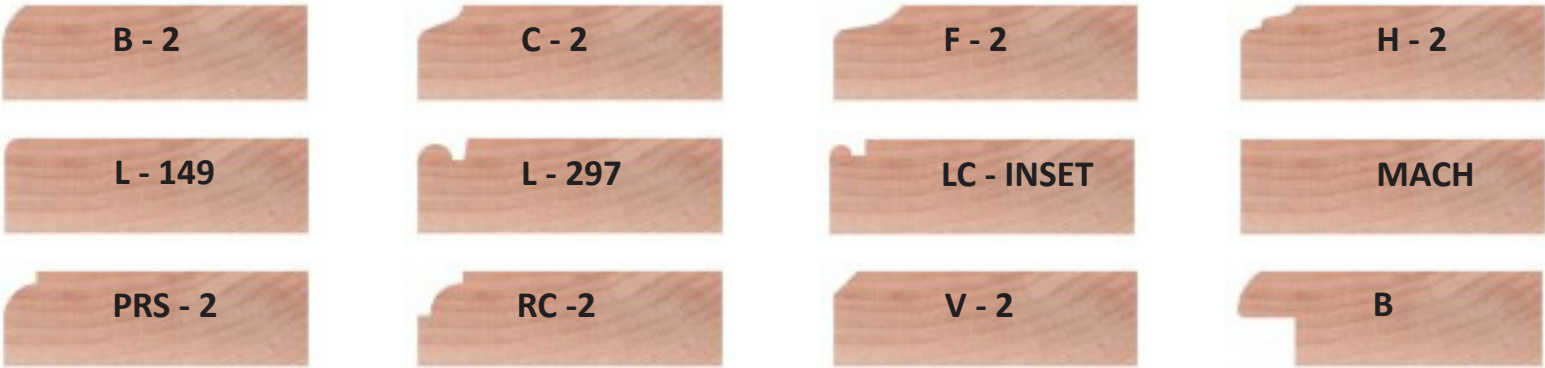

Design Your Own Door

The choice is yours at Bellevue Remodel and Design. Just in case you can't find your dream door from our large array of available door styles, we give you the freedom to design your own door. That's right, you can select every detail that goes into mak-ing your kitchen or bath project a reflection of you.

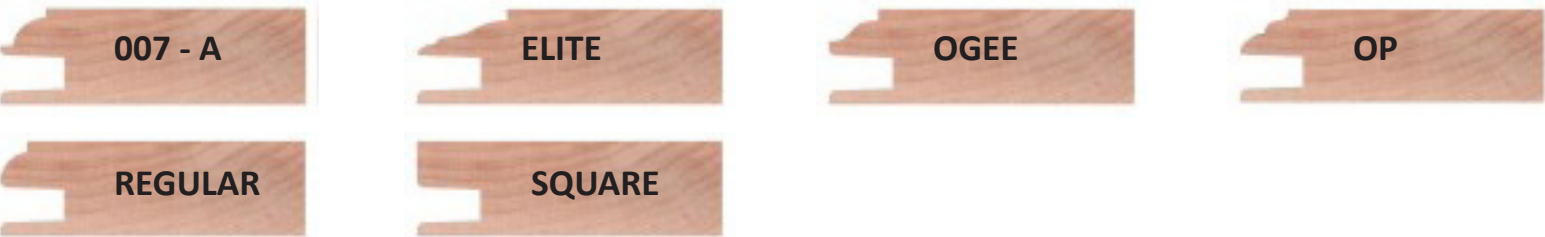

You can select your edge profile, panel raise, framing bead or even peg options.
